

# 臭氧-催化陶瓷膜耦合水处理技术 “催化膜制备与除污染性能评价”

水质分析与  
水质安全保障技术

李延宁, 郭杨, 齐飞, 水体污染源控制技术北京市重点实验室

## 1. 研究背景

- 城市规模不断扩大, 人口集聚膨胀, 水资源供需矛盾突出;
- 再生水已经成为缓解城市水资源紧张的重要手段之一;
- “十二五”末, 北京市再生水用量已达10亿m<sup>3</sup>。

- 现有再生水技术难以满足其安全利用要求

### 再生水中风险污染物

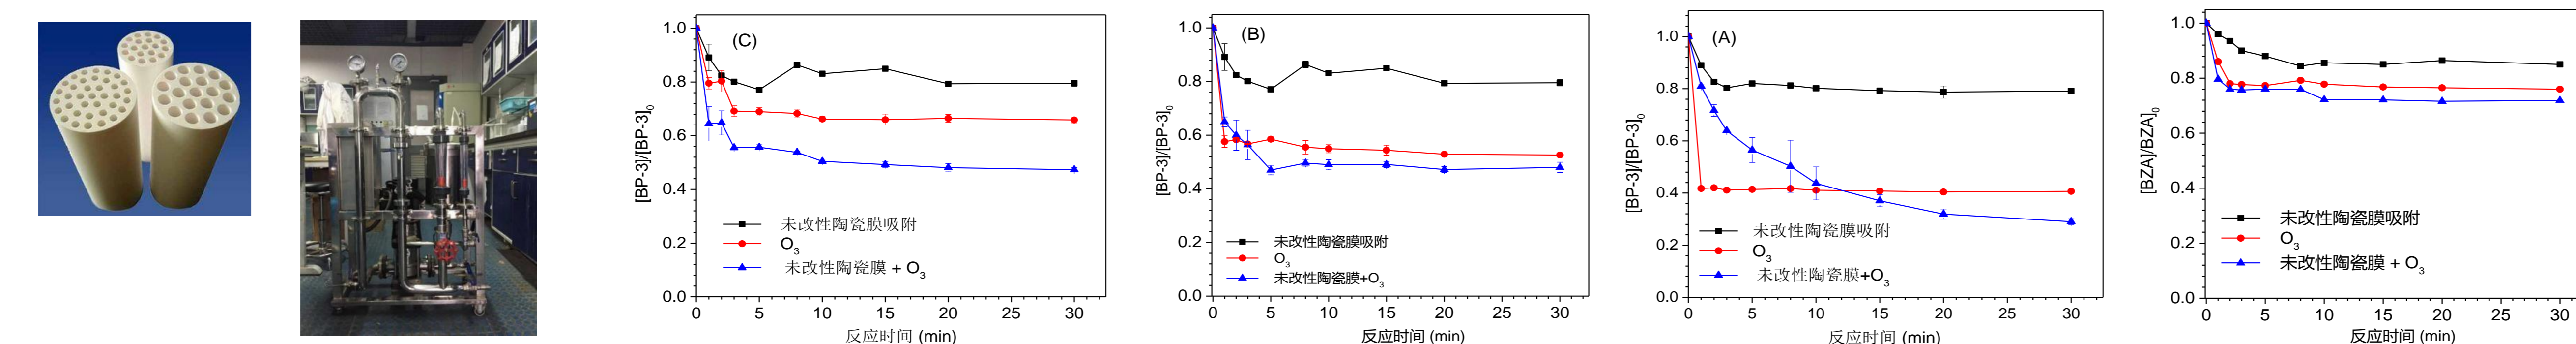

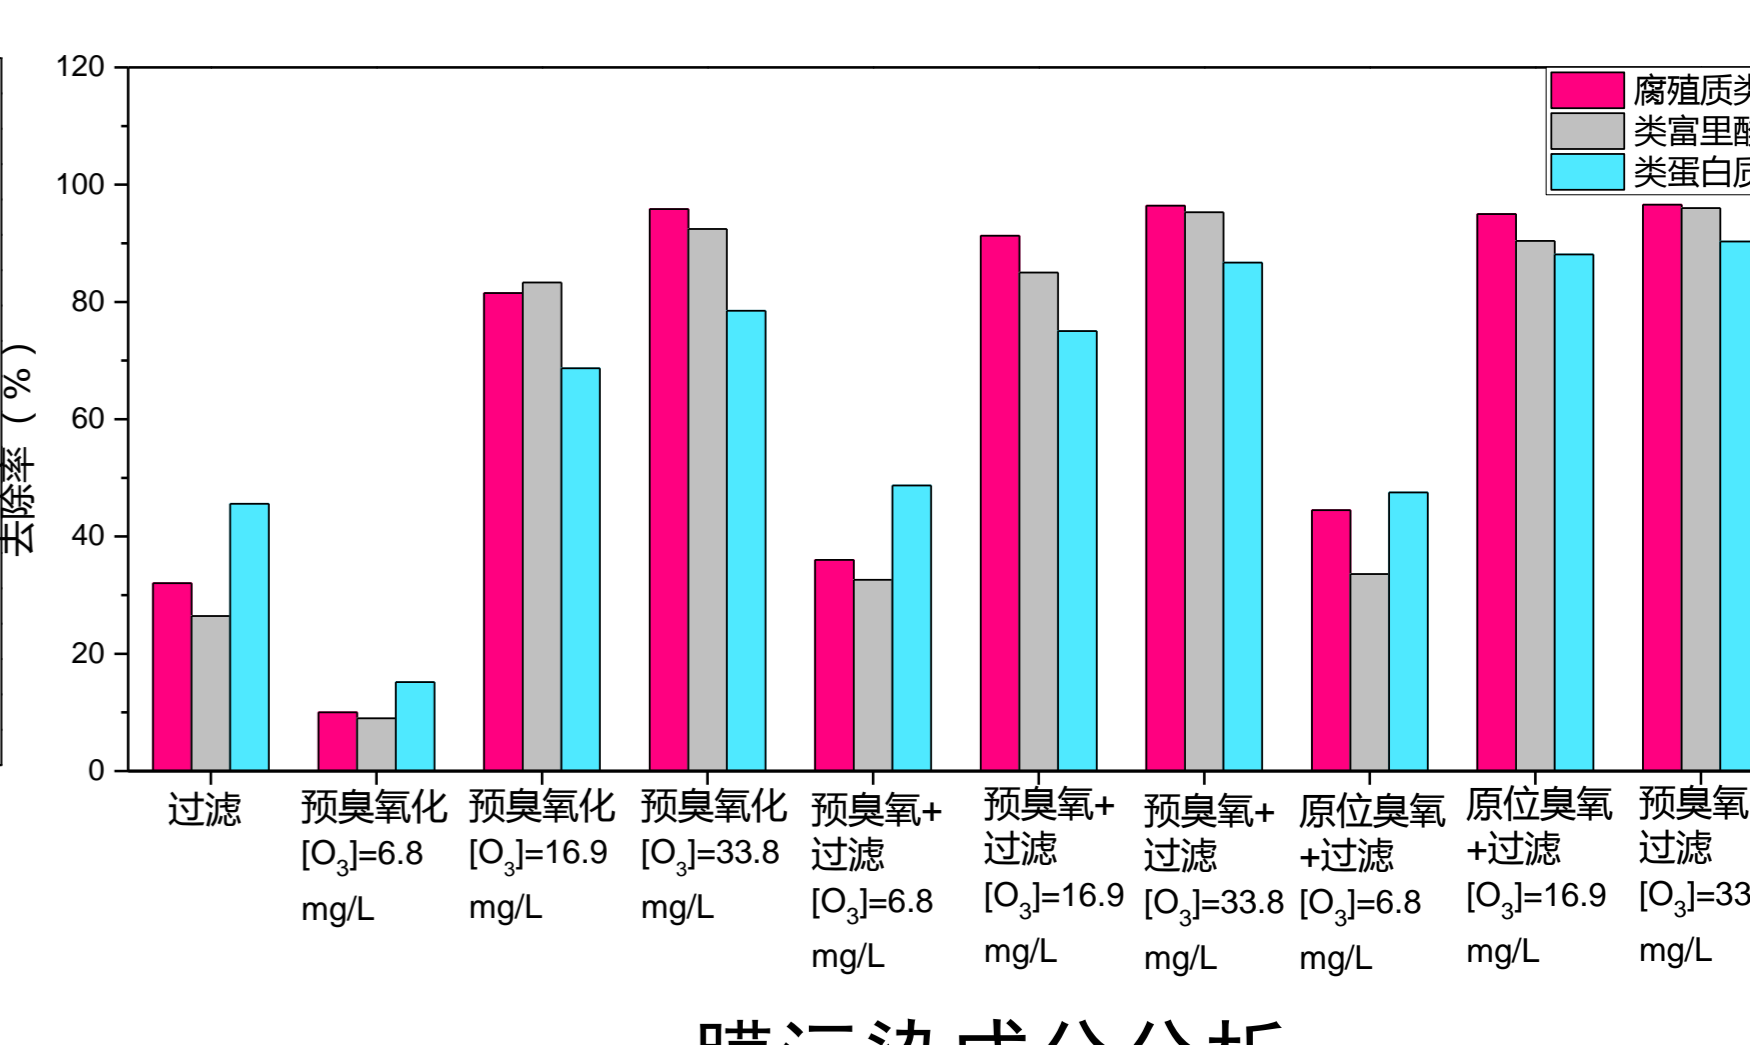

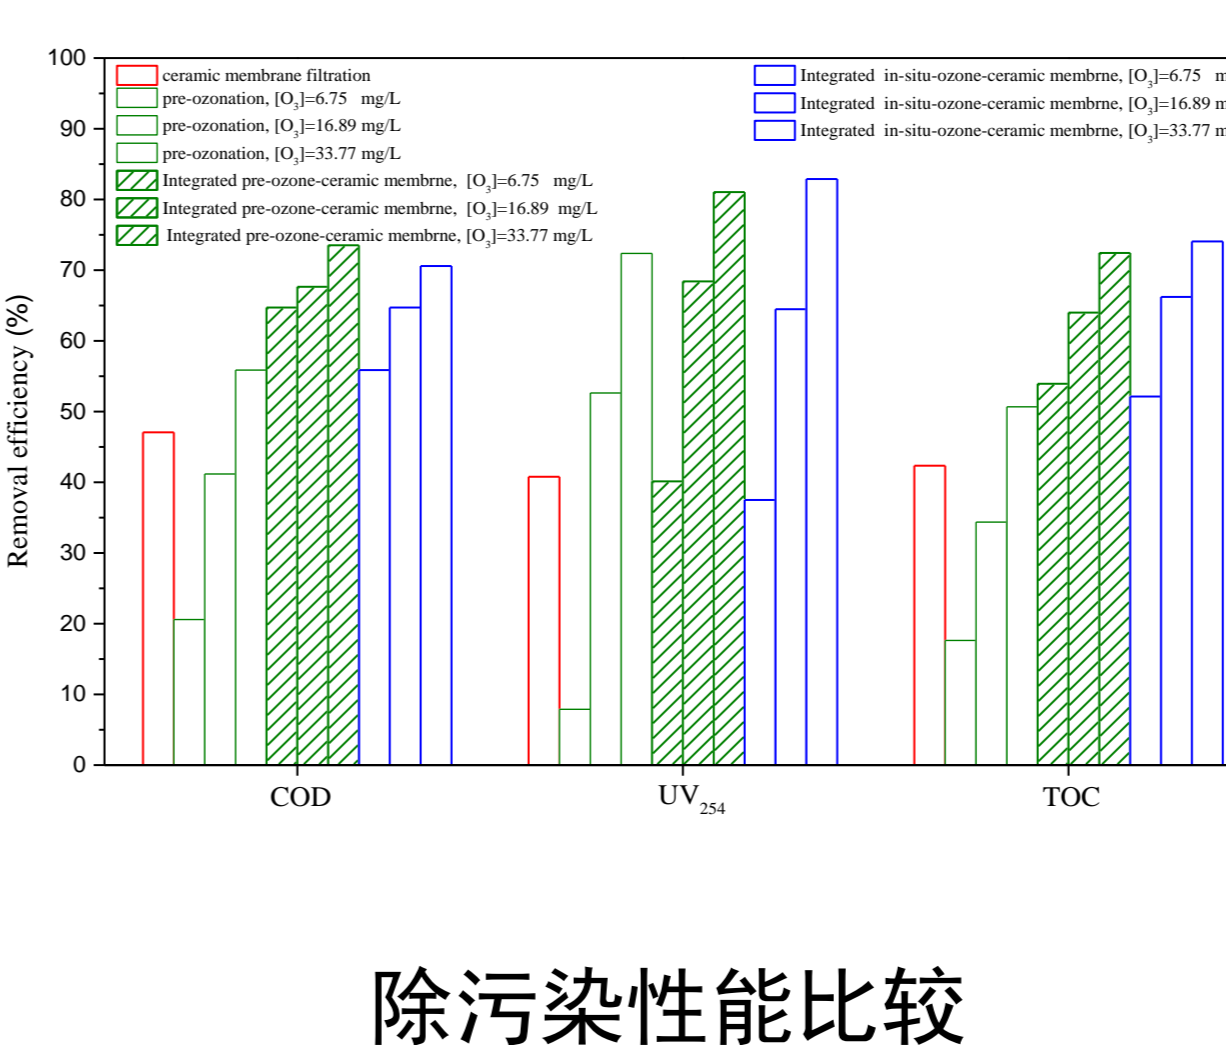

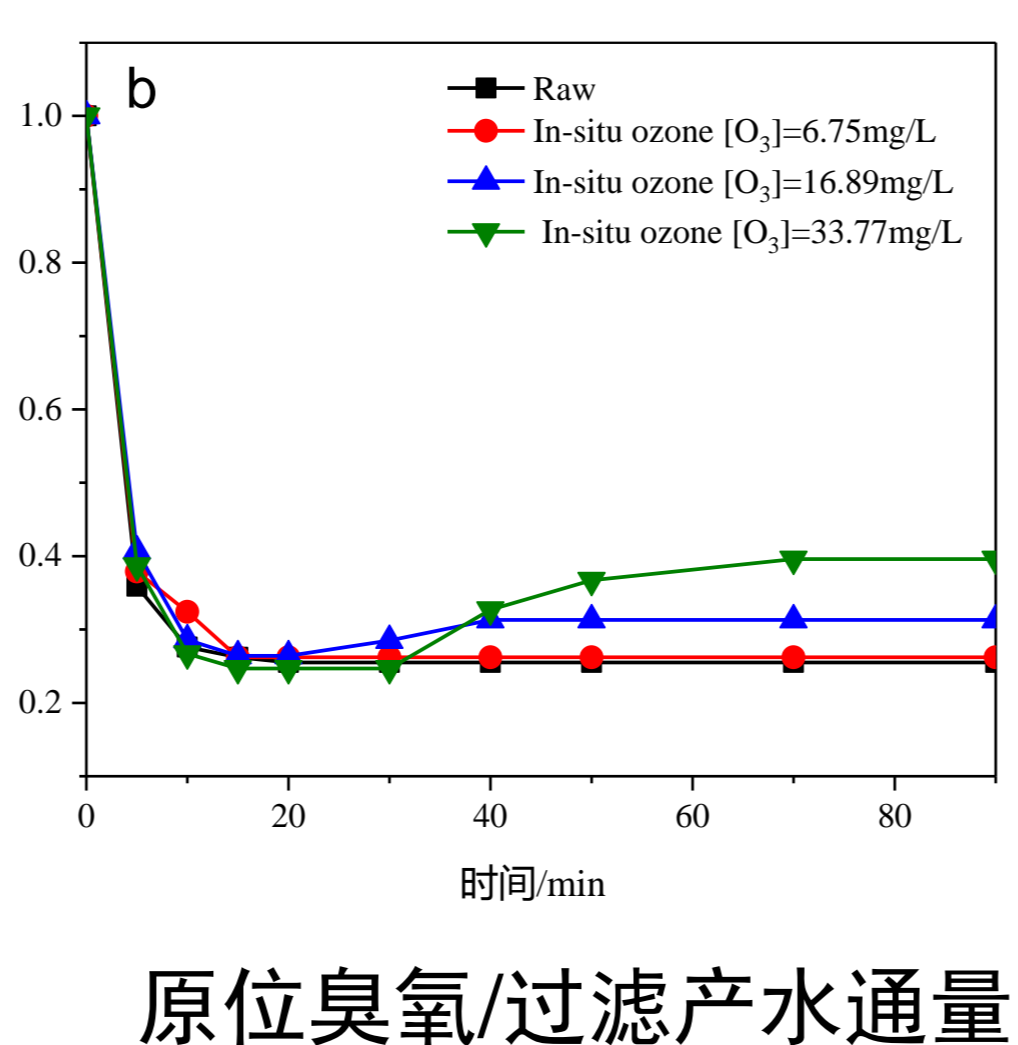

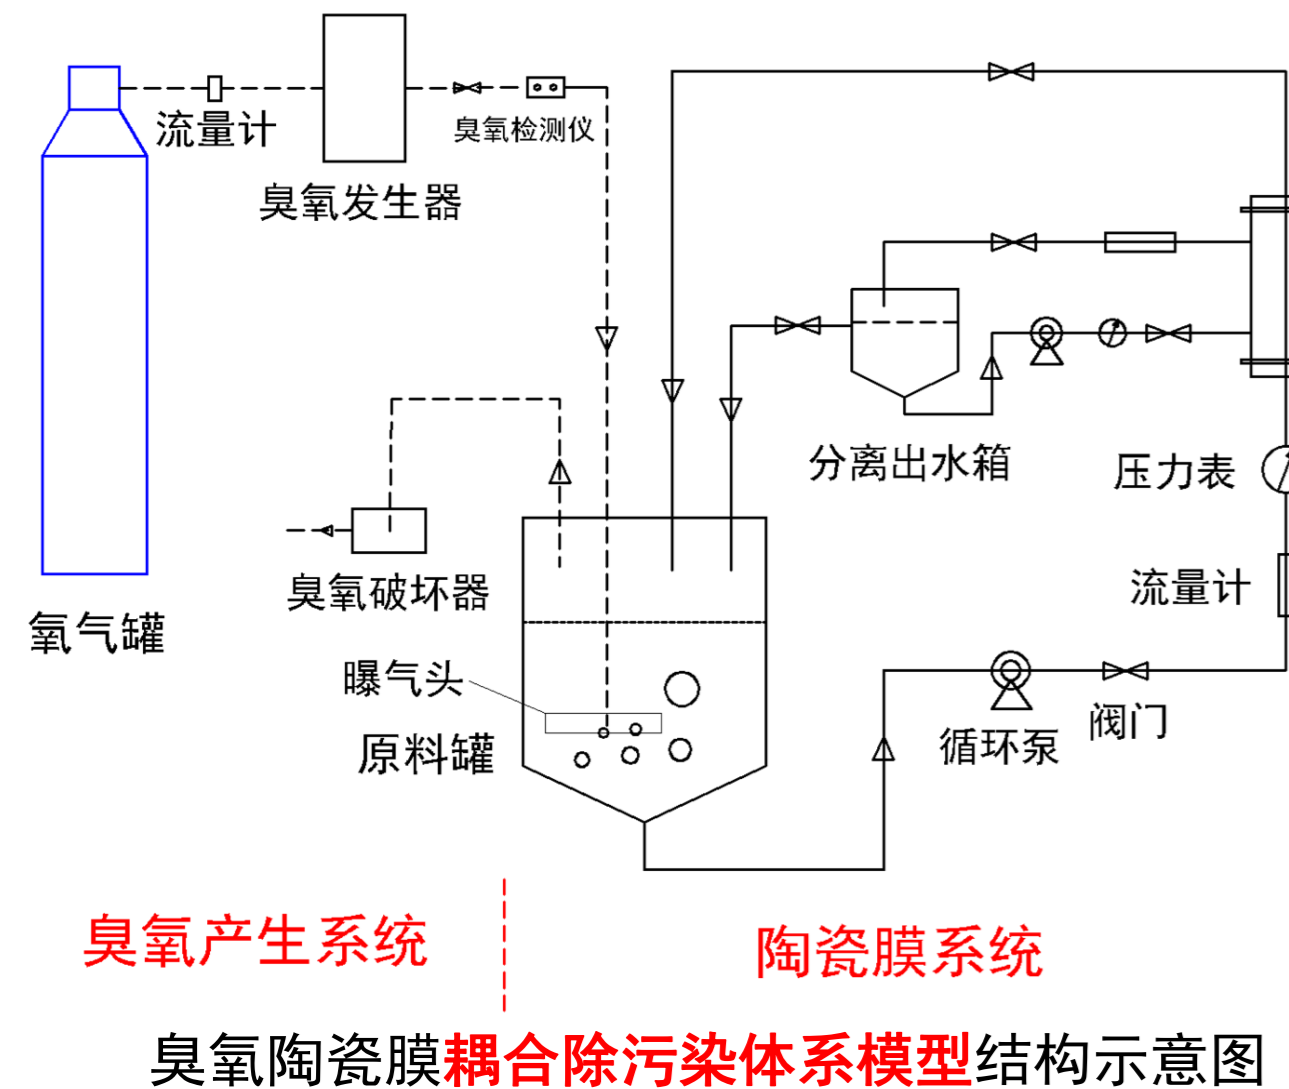

- 低浓度有机污染物——内分泌干扰物、药物与个人护理品
- 二级出水有机质 (EfOM)
- EfOM衍生消毒副产物

### 现有再生水处理工艺类型与主要问题

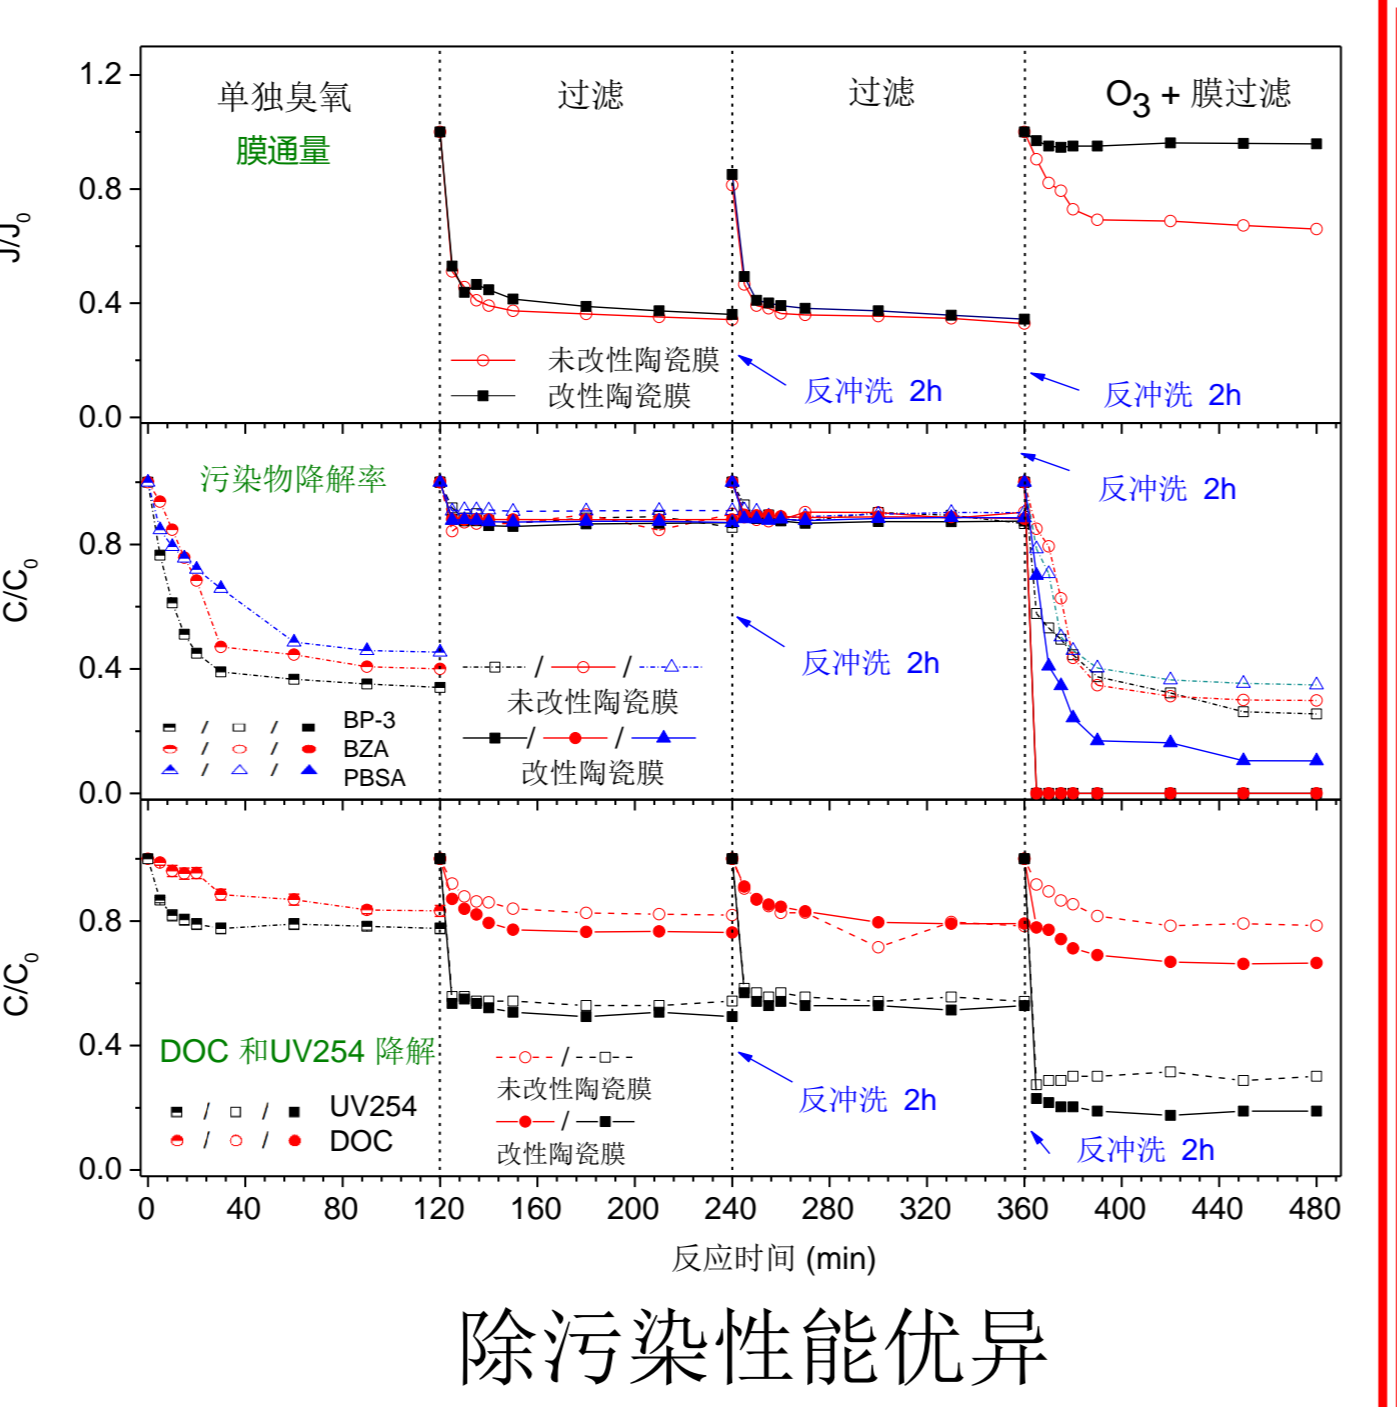

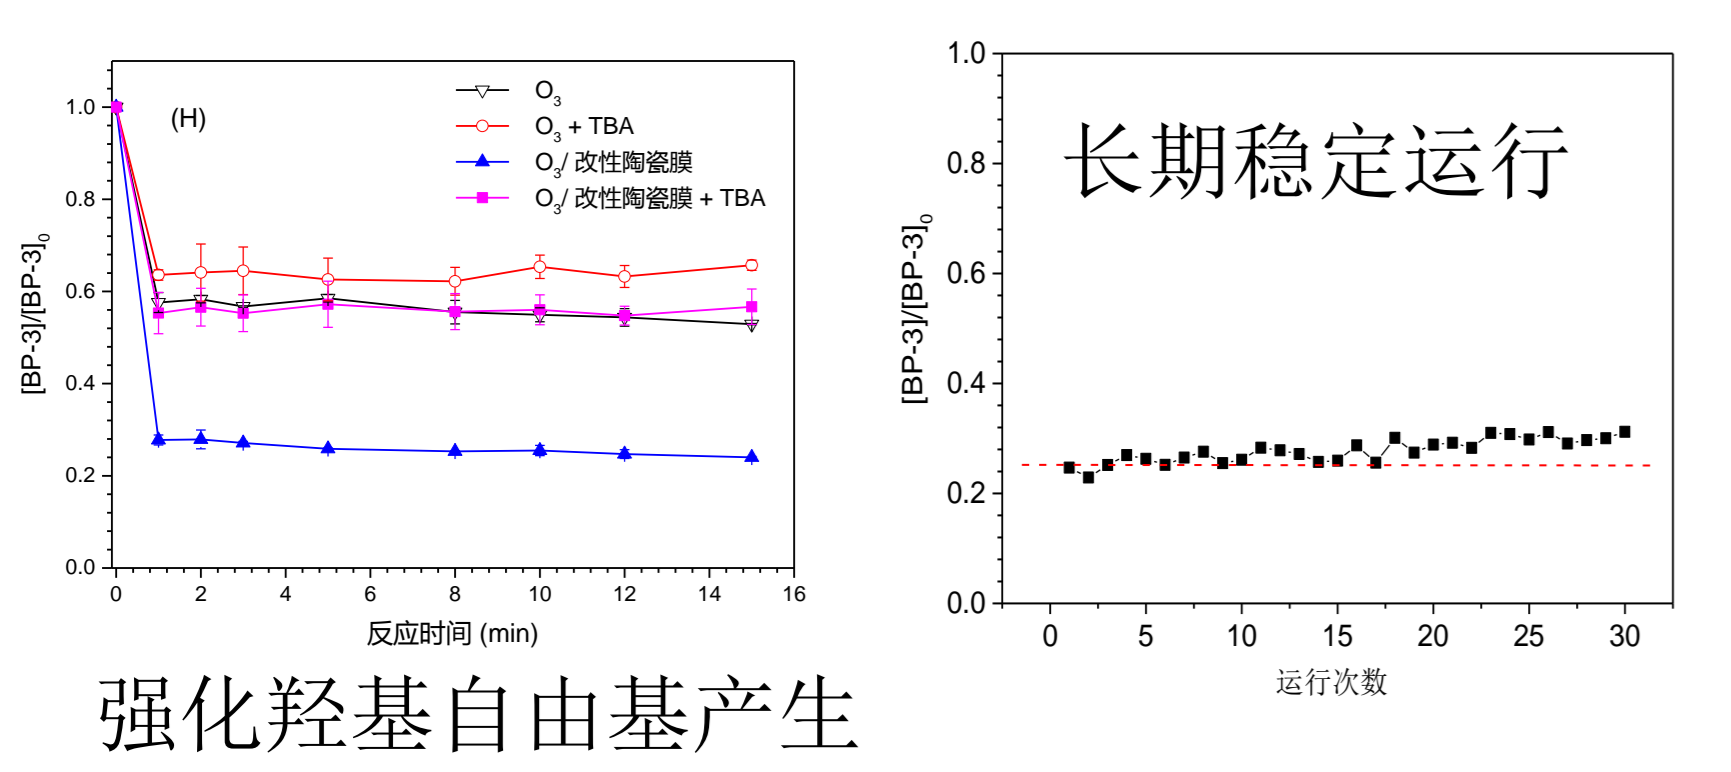

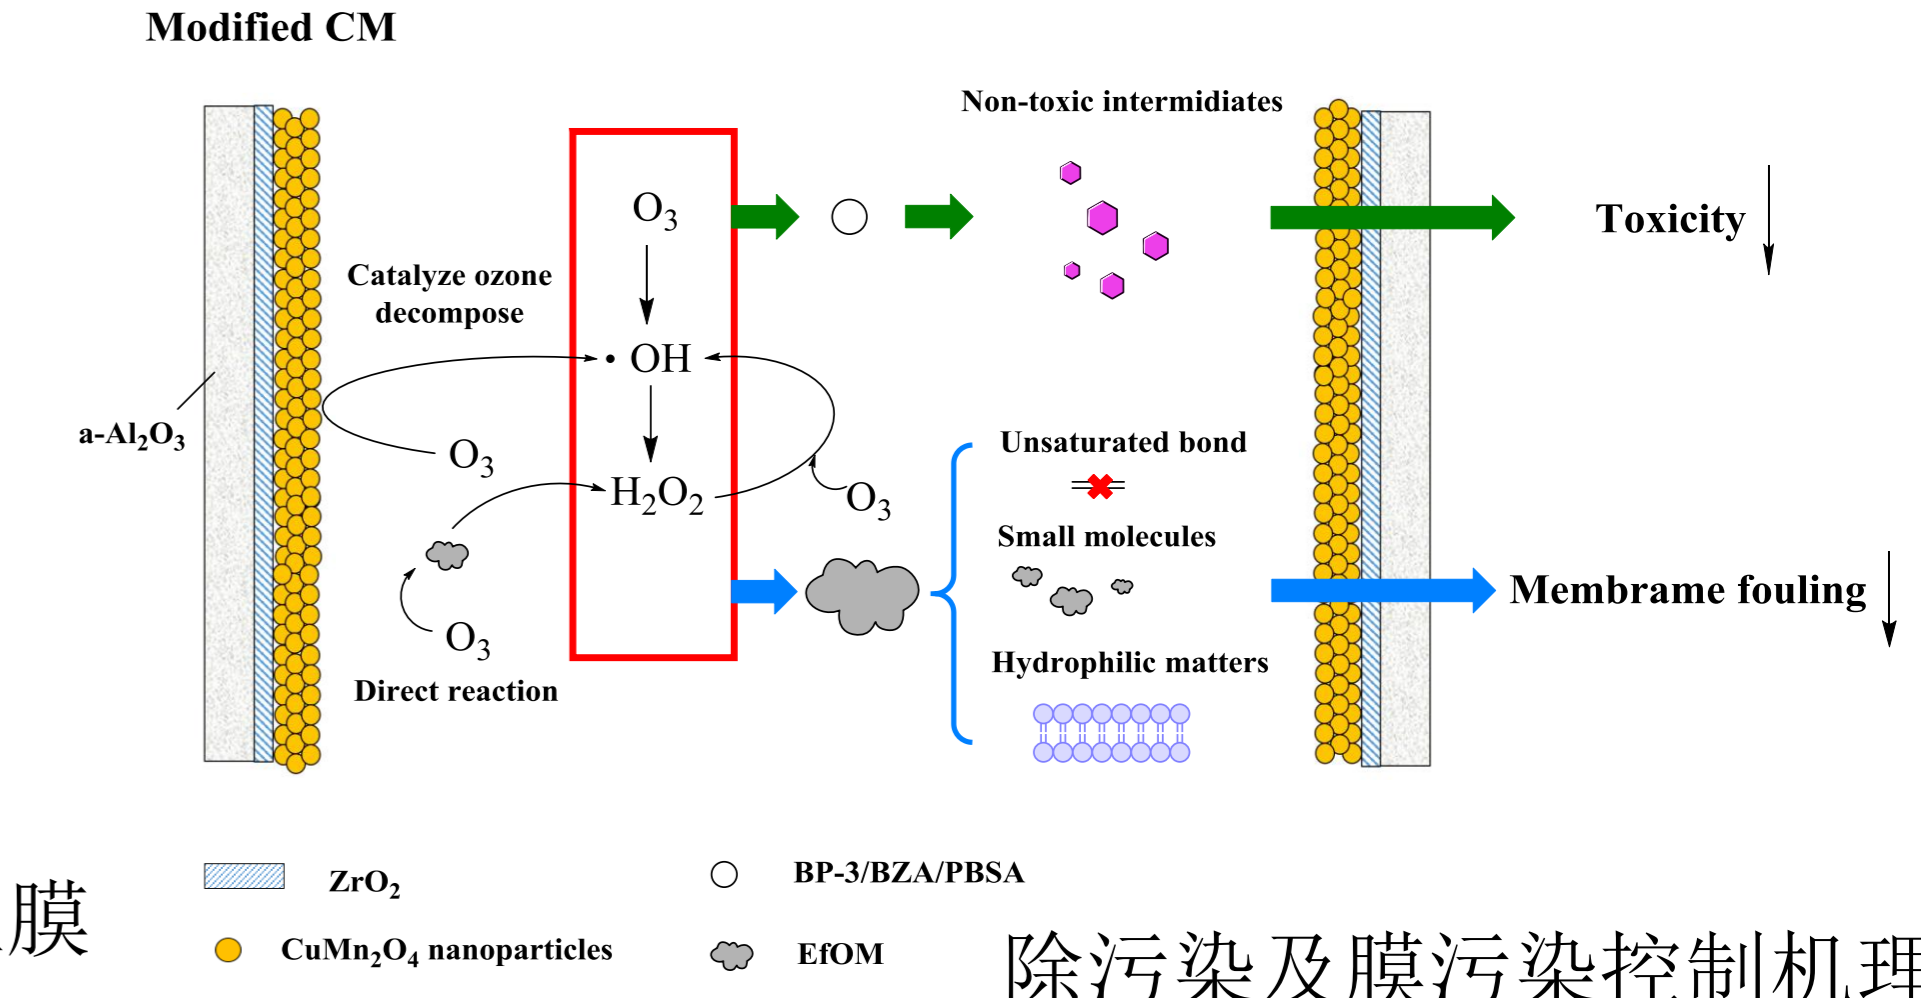

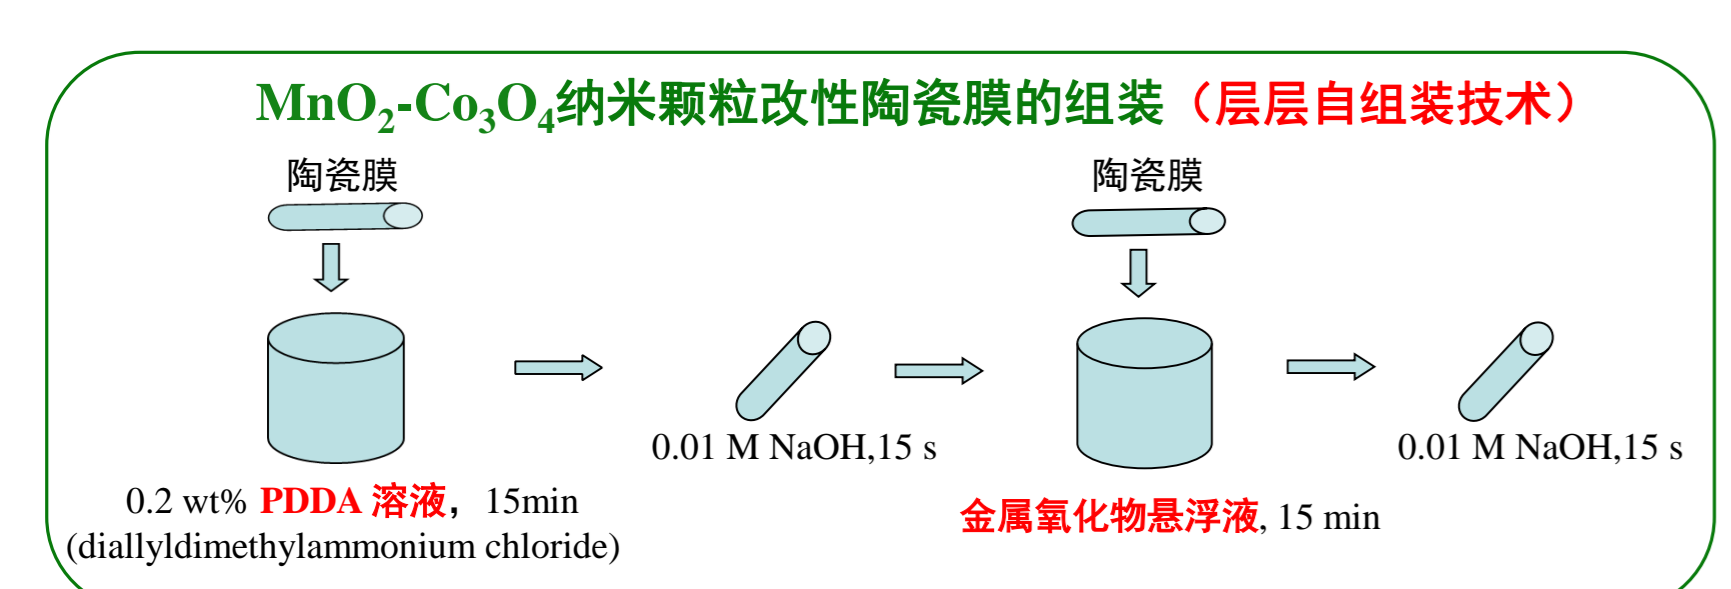

亟待开发除污染效能稳定、脱毒能力强的再生水处理技术, 降低再生水的潜在环境风险!

## 2. 臭氧-陶瓷膜耦合技术

臭氧-陶瓷膜耦合技术对微量有机污染物的去除能力十分微弱!

## 3. 催化陶瓷膜组装及其与臭氧的催化耦合

## 4. 成果产出
